## Marker Balls

### Aircraft Warning Markers

These marker balls are highly durable, clam-shell designed, permanent warning markers suitable for distribution powerlines & guy wires.

The EE 60 ball is our biggest selling marker because of its robust & simple design. It attaches to all common conductors rather than needing matching armour rods. It is made from tough fibreglass with a high-gloss long lasting finish and the 2 halves are securely fastened together with plastic bolts so there are no metal components. It complies with AS/NZ 3892.

The bright orange, easy to install fibreglass markers are available in both 30cm and 60cm.

**Simple to specify and fit as 1 size fits all conductors up to 24 mm dia**

**PART 1525  
MARKER BALL 30cm FIBREGLASS ORANGE**

**PART 1510  
MARKER BALL 60cm FIBREGLASS ORANGE**
